Artem Serdiuk

Backend and Full Stack Developer

Kropyvnytskyi, Ukraine | artom.serdyuk.600@gmail.com | +380937946134

Portfolio: https://megumax.github.io/MeguMax/

GitHub: MeguMax | LinkedIn | Upwork

Available immediately for remote work from Ukraine; open to European relocation subject to work authorization.

I build backend services and internal tools for teams working across APIs, documents and CRMs. My projects connect scattered records and manual steps into reviewable workflows, preserve users' corrections and make interrupted operations recoverable. My main stack is Node.js and TypeScript.

I also build booking, onboarding and follow-up workflows across websites, GoHighLevel and Shopify, with routing between forms, payments and CRM records.

Technical skills

Backend: JavaScript, TypeScript, Node.js, Express, Fastify, REST APIs, webhooks.
Data: PostgreSQL, SQLite, MongoDB, Supabase; transactions, queues, idempotency.
Integrations and AI: OAuth/PKCE, MCP, OpenAI Responses API, Microsoft Graph, IMAP/MIME.
Web and automation: React, Next.js, HTML/CSS, Strapi; GoHighLevel, Shopify, n8n, Make, Zapier.
Delivery: Docker, Playwright, automated testing; AWS SQS/DynamoDB, Terraform.

Experience

LeafSplit | Oct 2026 - Present

Backend Lead

- Work with the AI development team on model training experiments and evaluation using Python, NumPy and PyTorch.
- Build experimental tooling and automated checks so model experiments can be rerun and compared against baseline models.

YOUR R&D | Nov 2025 - Present

CRM and Automation Developer

Independently built a workspace for finding Upwork opportunities, reusing relevant project evidence and reviewing AI-assisted proposal drafts, owning the backend and operator interface.

- Kept Upwork/MCP connections tied to the correct account with OAuth/PKCE, encrypted tokens and coordinated refresh.
- Protected reviewers' changes during background processing and made interrupted operations recoverable with transactional state and revision checks.
- Linked AI drafts to permitted source evidence and required review before delivery, with duplicate-send locks and explicit handling of unknown outcomes.
- Built regression tests and Docker release tooling; documented setup and recovery paths for handoff.

FunnelJet (eFunnelz) | May 2025 - Present

Frontend and Full Stack Developer

- Build React/Next.js applications with forms, dashboards, booking and e-commerce flows.
- Connect website forms, Stripe-triggered onboarding and GoHighLevel records through APIs and webhooks, with routing and follow-up automation.

Selected engineering work

Upwork workflow platform

JavaScript, Node.js, Express, PostgreSQL, MCP, OAuth/PKCE, OpenAI Responses API

- Built one workflow for reviewers to qualify opportunities, reuse project evidence and inspect AI-assisted drafts before approving delivery.
- Preserved manual edits and source history; used row locks, revision checks and explicit uncertain states so interrupted operations can be checked before another attempt.

Case study, screenshots and architecture

Legal document workflow

TypeScript, Node.js, SQLite/WAL, Microsoft Graph, OneDrive, Playwright, Office.js, Python

- Built an intake-to-review workflow where legal teams inspect case-specific email/PDF sources, correct extracted fields and keep their edits while processing continues.
- Kept cases isolated, pinned reviewed document versions and reconciled uncertain remote saves. Added OCR fallback and an Excel add-in/Python worker for editable PDF generation.

Case study, screenshots and architecture

PatientNow and GoHighLevel synchronization

TypeScript, Fastify, AWS SQS FIFO, DynamoDB, EFS, Terraform, Docker

- Built a backend designed to keep contact and appointment records consistent across two systems, including calendars and blocked time; mapped PatientNow orders/refunds to CRM opportunities.
- Added identity and duplicate checks, retries and reconciliation for missed updates; surfaced conflicting records for review. Authored deployment definitions and an English operations guide.

Case study, screenshots and architecture

Other applications: CRM-KP: React/TypeScript and Express/MongoDB CRM prototype. Wishlist: React/TypeScript and Supabase/PostgreSQL app with groups, reservations, contribution tracking and realtime chat.

Earlier experience

Kropyvnytskyi City Council | Feb 2025 - May 2025

IT Engineer, Department of Information Technologies

Supported internal systems and workstations, resolved user issues and documented internal automation.

Earlier freelance development

React / Next.js

Delivered paid frontend work for a product that later closed, including dashboards, forms and payment-related interfaces.

Education and languages

Kherson National Technical University - BSc Software Engineering, specialty 121. In progress; expected graduation 2027.

Ukrainian: native. English: B1-B2, self-assessed.
