Artem Serdiuk

Backend and Full Stack Developer

Kropyvnytskyi, Ukraine | artom.serdyuk.600@gmail.com | +380937946134

Portfolio: https://megumax.github.io/MeguMax/

GitHub: MeguMax | LinkedIn | Upwork

Available immediately for remote work from Ukraine; open to European relocation subject to work authorization.

I build backend services, API integrations and internal tools with Node.js and TypeScript. I take projects from requirements through implementation, testing and handoff, with a focus on consistent data, recoverable failures and workflows people can operate.

My client work also includes GoHighLevel and Shopify integrations, Notion-to-CRM automation, Stripe-triggered onboarding, booking flows and custom web interfaces.

Technical skills

Backend: JavaScript, TypeScript, Node.js, Express, Fastify, REST APIs, webhooks.
Data: PostgreSQL, SQLite, MongoDB, Supabase; transactions, queues, idempotency.
Integrations and AI: OAuth/PKCE, MCP, OpenAI Responses API, Microsoft Graph, IMAP/MIME.
Web and automation: React, Next.js, HTML/CSS, Strapi; GoHighLevel, Shopify, n8n, Make, Zapier.
Delivery: Docker, Playwright, automated testing; AWS SQS/DynamoDB, Terraform.

Experience

LeafSplit | Oct 2026 - Present
Backend Lead

- Work with the AI development team on model training experiments and evaluation using Python, NumPy and PyTorch.
- Build experimental tooling and automated checks for reproducible runs and comparisons with baseline models.

YOUR R&D | Nov 2025 - Present
CRM and Automation Developer

Independently designed and built an internal Upwork job-discovery and proposal-preparation platform with Node.js, Express, PostgreSQL and a JavaScript operator interface.

- Built authenticated MCP connections with OAuth/PKCE, encrypted token storage and coordinated refresh; integrated Upwork's official API.
- Designed transactional workflow state, revision checks and background jobs to preserve operator edits and recover from uncertain external outcomes.
- Integrated schema-validated AI draft preparation, source-evidence checks, human approval and duplicate-submission protection.
- Owned backend and operator UI implementation, regression tests, Docker release tooling and technical handoff.

FunnelJet (eFunnelz) | May 2025 - Present
Frontend and Full Stack Developer

- Build React/Next.js applications with forms, dashboards, booking and e-commerce flows.
- Connect websites and GoHighLevel through APIs and webhooks; implement CRM routing, Stripe-triggered onboarding and follow-up automation.

Selected engineering work

Upwork workflow platform

JavaScript, Node.js, Express, PostgreSQL, MCP, OAuth/PKCE, OpenAI Responses API

- Combined job discovery, qualification, reusable portfolio evidence and reviewed application drafts in one operator workspace.
- Used row locks, revision checks and explicit uncertain states to protect concurrent edits and reconcile interrupted operations before another attempt.

Case study, screenshots and architecture

Legal document workflow

TypeScript, Node.js, SQLite/WAL, Microsoft Graph, OneDrive, Playwright, Office.js, Python

- Built email/PDF intake into isolated case drafts, persistent workers and an admin workspace for extraction review, OCR fallback and document preparation.
- Preserved manual corrections, pinned reviewed document versions and reconciled uncertain remote saves. Built an Excel add-in and isolated Python worker for interactive PDF generation.

Case study, screenshots and architecture

PatientNow and GoHighLevel synchronization

TypeScript, Fastify, AWS SQS FIFO, DynamoDB, EFS, Terraform, Docker

- Built two-way synchronization for contacts, appointments, provider calendars and blocked time; mapped PatientNow orders and refunds to CRM opportunities.
- Handled identity matching, duplicate/stale events, echo suppression, retries and reconciliation. Authored API/worker deployment definitions and an English operations guide.

Case study, screenshots and architecture

Other applications: CRM-KP: React/TypeScript and Express/MongoDB CRM prototype. Wishlist: React/TypeScript and Supabase/PostgreSQL app with groups, reservations, contribution tracking and realtime chat.

Earlier experience

Kropyvnytskyi City Council | Feb 2025 - May 2025

IT Engineer, Department of Information Technologies

Supported internal systems and workstations, resolved user issues and documented internal automation.

Earlier freelance development

React / Next.js

Delivered paid frontend work for a product that later closed, including dashboards, forms and payment-related interfaces.

Education and languages

Kherson National Technical University - BSc Software Engineering, specialty 121. In progress; expected graduation 2027.

Ukrainian: native. English: B1-B2, self-assessed.
